

Maintenance

Suave, Tierrafino and Bone China Interior Finishes

The maintenance of Ambitec's Suave, Tierrafino and Bone China Finishes are extremely easy!

Approximately 4 weeks after installation the product has completely hardened and can be maintained as follows:

Use a clean dry micro fibre cloth for normal dusting.

Use a similar cloth, dampened very slightly to remove scuffmarks. Gently rub over the marks in a circular movement.

For more persistent scuffmarks a small amount of Mr. Muscle Glass & Surface Cleaner (Clear version only!) sprayed onto the damp cloth can be used. However it is important to test on a small, preferably 'hidden', spot first.

Deeper scratches can be removed by light circular sanding. Use normal sandpaper; grid size 180-220.

For other more substantial stains or damage please call Ambitec for a maintenance and service visit, or at any time for advice.

Never use any spirits; thinners; wax or furniture oil to remove stains or scuffmarks on Ambitec Interior finishes!

Note: External corners are the most vulnerable, damage to the surface finish mainly occurs by pulling vacuum cleaner power cords around the edging of the corner. This should be avoided.

If there is no skirting installed, extreme care should be taken when washing hard floors; avoid dirty mops rubbing against the bottom edge of the interior surface finish, as eventually a dirty track will appear.
