

# Specialist Finishes

## Bone China - Specialist Finish

This unique, subtly beautiful interior finish meets all the criteria of our versatility challenge.

Its pearly lustre looks right at home in a contemporary setting, suiting the stark minimalism of a simple, white room.

The fine cracks or 'crazing' that occur during the final stages of the curing process can perfectly encapsulate the ageing beauty of an Italian fresco, evoking the warm, sunny glow and history of the Mediterranean.

Most commonly expressed in a natural Bony White colour, the more pronounced 'distressed' areas of the Bone China specialist finish have a translucent appearance that seem to be soft to the touch. Its subtle nature makes it particularly suitable for feature walls and as a backdrop for art.

The 'crazing', which some of our clients have compared to the delicate charm of 19th century porcelain, makes this surface finish highly distinctive, guaranteed to draw the curious eyes of visitors.

**Bone China is ideal throughout any interior with a low density use, as it is more "delicate" than other Ambitec Specialist finishes.**

Due to the nature of the product it cannot be used in bathrooms or en-suites or other interior spaces where water is present affecting humidity.

The surface is always sealed with a special sealer, but the crazing remains "open" and therefore is highly permeable. Care should be taken to avoid spilling any liquid near the surface of Bone China.

Bone China is a specialist surface finish suitable for use on absorbent and prepared indoor surfaces such as plasterboard, concrete, brickwork, blockwork or bonding plaster. Refer to the Ambitec substrate specifications for additional information.

For project examples see the 'Bone China Gallery' on the Ambitec website.
